

*Every Raindrop Counts*

The SPUWCD continues to promote rainwater harvesting as a practical conservation method for our area. Over the years, comments have been made that rainwater harvesting is not practical in our area because we do not receive enough rainfall. That is the very reason that the District encourages constituents to put some form of rainwater harvesting into practice. The District has cost-shared several projects in recent years.

**Bright Beginnings Pre-School**

2010 installation

24,000 gallons of rainwater storage
